

Mouse

Mouse

A mouse (pl.: mice) is a small rodent. Characteristically, mice are known to have a pointed snout, small rounded ears, a body-length scaly tail, and a high breeding rate. The best known mouse species is the common house mouse (*Mus musculus*). Mice are also popular as pets. In some places, certain kinds of field mice are locally common. They are known to invade homes for food and shelter.

Mice are typically distinguished from rats by their size. Generally, when a muroid rodent is discovered, its common name includes the term mouse if it is smaller, or rat if it is larger. The common terms rat and mouse are not taxonomically specific. Typical mice are classified in the genus *Mus*, but the term mouse is not confined to members of *Mus* and can also apply to species from other genera such as the deer mouse (*Peromyscus*).

Domestic mice sold as pets often differ substantially in size from the common house mouse. This is attributable to breeding and different conditions in the wild. The best-known strain of mouse is the white lab mouse. It has more uniform traits that are appropriate to its use in research.

Cats, wild dogs, foxes, birds of prey, snakes and certain kinds of arthropods have been known to prey upon mice. Despite this, mice populations remain plentiful. Due to its remarkable adaptability to almost any environment, the mouse is one of the most successful mammalian genera living on Earth today.

In certain contexts, mice can be considered vermin. Vermin are a major source of crop damage, as they are known to cause structural damage and spread disease. Mice spread disease through their feces and are often carriers of parasites. In North America, breathing dust that has come in contact with mouse excrement has been linked to hantavirus, which may lead to hantavirus pulmonary syndrome (HPS).

Primarily nocturnal animals, mice compensate for their poor eyesight with a keen sense of hearing. They depend on their sense of smell to locate food and avoid predators.

In the wild, mice are known to build intricate burrows. These burrows have long entrances and are equipped with escape tunnels. In at least one species, the architectural design of a burrow is a genetic trait.

Mouse (programming language)

The Mouse (sometimes written as MOUSE) programming language is a small computer programming language developed by Dr. Peter Grogono in the late 1970s and early 1980s. It was developed as an extension of an earlier language called MUSYS, which was used to control digital and analog devices in an electronic music studio.

Mouse was originally intended as a small, efficient language for microcomputers with limited memory. It is an interpreted, stack-based language and uses Reverse Polish notation. To make an interpreter as easy as

possible to implement, Mouse is designed so that a program is processed as a stream of characters, interpreted one character at a time.

The elements of the Mouse language consist of a set of (mostly) one-character symbols, each of which performs a specific function (see table below). Since variable names are limited to one character, there are only 26 possible variables in Mouse (named A-Z). Integers and characters are the only available data types.

Despite these limits, Mouse includes a number of relatively advanced features, including:

Conditional branching

Loops

Pointers

Macros (subroutines (which may be recursive))

Arrays

Code tracing

The design of the Mouse language makes it ideal for teaching the design of a simple interpreter. Much of the book describing Mouse is devoted to describing the implementation of two interpreters, one in Z80 assembly language, the other in Pascal.

Computer mouse

A computer mouse (plural mice; also mice) is a hand-held pointing device that detects two-dimensional motion relative to a surface. This motion is typically - A computer mouse (plural mice; also mice) is a hand-held pointing device that detects two-dimensional motion relative to a surface. This motion is typically translated into the motion of the pointer (called a cursor) on a display, which allows a smooth control of the graphical user interface of a computer.

The first public demonstration of a mouse controlling a computer system was done by Doug Engelbart in 1968 as part of the Mother of All Demos. Mice originally used two separate wheels to directly track movement across a surface: one in the x-dimension and one in the Y. Later, the standard design shifted to use a ball rolling on a surface to detect motion, in turn connected to internal rollers. Most modern mice use optical movement detection with no moving parts. Though originally all mice were connected to a computer by a cable, many modern mice are cordless, relying on short-range radio communication with the connected system.

In addition to moving a cursor, computer mice have one or more buttons to allow operations such as the selection of a menu item on a display. Mice often also feature other elements, such as touch surfaces and scroll wheels, which enable additional control and dimensional input.

To a Mouse

"To a Mouse, on Turning Her Up in Her Nest With the Plough, November, 1785" is a Scots-language poem written by Robert Burns in 1785. It was included in "To a Mouse, on Turning Her Up in Her Nest With the Plough, November, 1785" is a Scots-language poem written by Robert Burns in 1785. It was included in the Kilmarnock Edition and all of the poet's later editions, such as the Edinburgh Edition. According to legend, Burns was ploughing in the fields at his Mossgiel Farm and accidentally destroyed a mouse's nest, which it needed to survive the winter. Burns's brother, Gilbert, claimed that the poet composed the poem while still holding his plough.

Mickey Mouse

Mickey Mouse is an American cartoon character co-created in 1928 by Walt Disney and Ub Iwerks. The longtime icon and mascot of the Walt Disney Company - Mickey Mouse is an American cartoon character co-created in 1928 by Walt Disney and Ub Iwerks. The longtime icon and mascot of the Walt Disney Company, Mickey is an anthropomorphic mouse who typically wears red shorts, large shoes, and white gloves. He is often depicted with a cast of characters including his girlfriend Minnie Mouse, his pet dog Pluto, his best friends Donald Duck and Goofy, and his nemesis Pete.

Mickey was created as a replacement for a prior Disney character, Oswald the Lucky Rabbit. The character was originally to be named "Mortimer Mouse", until Disney's wife, Lillian, suggested "Mickey". Mickey first appeared in two 1928 shorts *Plane Crazy* and *The Gallopin' Gaucho* (which were not picked up for distribution) before his public debut in *Steamboat Willie* (1928). The character went on to appear in over 130 films, mostly shorts as well as features such as *Fantasia* (1940). Since 1930, Mickey has been featured extensively in comic strips (including the Mickey Mouse comic strip, which ran for 45 years) and comic books (such as *Mickey Mouse*). The character has also been featured in television series such as *The Mickey Mouse Club* (1955–1996).

Inspired by such silent film personalities as Charlie Chaplin and Douglas Fairbanks, Mickey is traditionally portrayed as a sympathetic underdog who gets by on pluck and ingenuity in the face of challenges bigger than himself. The character's depiction as a small mouse is personified through his diminutive stature and falsetto voice, the latter of which was originally provided by Walt Disney. Though originally characterized as a cheeky lovable rogue, Mickey was rebranded over time as a nice guy, usually seen as a spirited, yet impulsive hero.

Mickey also appears in media such as video games as well as merchandising and is a meetable character at the Disney parks. He is one of the world's most recognizable and universally acclaimed fictional characters. Ten of Mickey's cartoons were nominated for the Academy Award for Best Animated Short Film, one of which, *Lend a Paw*, won the award in 1941. In 1978, Mickey became the first cartoon character to have a star on the Hollywood Walk of Fame.

House mouse

The house mouse (*Mus musculus*) is a small mammal of the rodent family Muridae, characteristically having a pointed snout, large rounded ears, and a long - The house mouse (*Mus musculus*) is a small mammal of the rodent family Muridae, characteristically having a pointed snout, large rounded ears, and a long and almost hairless tail. It is one of the most abundant species of the genus *Mus*. Although a wild animal, the house mouse has benefited significantly from associating with human habitation to the point that truly wild populations are significantly less common than the synanthropic populations near human activity.

The house mouse has been domesticated as the pet or fancy mouse, and as the laboratory mouse, which is one of the most important model organisms in biology and medicine. The complete mouse reference genome was sequenced in 2002.

Mouseion

The Mouseion of Alexandria (Ancient Greek: Μουσαῖον Ἀλεξανδρινόν; Latin: *Musaeum Alexandrinum*), which arguably included the Library of Alexandria, - The Mouseion of Alexandria (Ancient Greek: Μουσαῖον Ἀλεξανδρινόν; Latin: *Musaeum Alexandrinum*), which arguably included the Library of Alexandria, was an institution said to have been founded by Ptolemy I Soter and his son Ptolemy II Philadelphus. Originally, the word mouseion meant any place that was dedicated to the Muses, often related to the study of music or poetry, but later associated with sites of learning such as Plato's Academy and Aristotle's Lyceum.

The Ptolemies reputedly established their Mouseion and Library with the intention of bringing together some of the best scholars of the Hellenistic world and collect all the books known at the time. Although it did not imply a collection of works of art, the word mouseion is the root for the modern usage of the word museum.

Mouse (disambiguation)

Yellow-necked mouse Large Mindoro forest mouse Florida mouse Big-eared hopping mouse Luzon montane forest mouse Forrest's mouse Pebble-mound mouse Golden mouse Bolam's - A mouse is a small rodent.

Mouse may also refer to:

Mickey Mouse universe

Mouse universe is a fictional shared universe which is the setting for stories involving Disney cartoon characters, including Mickey and Minnie Mouse - The Mickey Mouse universe is a fictional shared universe which is the setting for stories involving Disney cartoon characters, including Mickey and Minnie Mouse, Donald and Daisy Duck, Goofy and Pluto as the primary members (colloquially known as the "Sensational Six"), and many other characters related to them, most of them being anthropomorphic animals. The universe originated from the Mickey Mouse animated short films produced by Disney starting in 1928, although its first consistent version was created by Floyd Gottfredson in the Mickey Mouse newspaper comic strip. Real-world versions also exist in Disneyland and Tokyo Disneyland, called Mickey's Toontown.

Since 1990, the city in which Mickey lives is typically called Mouseton in American comics. In modern continuity, Mouseton is often depicted as being located in the fictional U.S. state of Calisota, analogous to Northern California. This fictional state was invented by comics writer Carl Barks in 1952 as the location for Donald Duck's home city, Duckburg.

The most consistent aspect of the Mickey Mouse universe is the characters. The most well-known include Mickey's girlfriend Minnie, pet dog Pluto, friends Donald, Goofy, Horace Horsecollar, Clarabelle Cow, and nemesis Pete. Some Disney productions incorporate characters from Disney's animated feature films, such as Bath Day (1946), in which Figaro from Pinocchio appears as Minnie's cat (becoming her recurring pet in several productions), Mickey's Christmas Carol (1983), and – most extensively – House of Mouse (2001–2003).

Although crossovers between the Mickey Mouse and Donald Duck universes have been infrequent, the two universes overlap. Characters from the Donald Duck universe make occasional appearances in the Mickey

Mouse universe and vice versa.

The term "Mickey Mouse universe" is not officially used by The Walt Disney Company, but it has been used by Disney comics author and animation historian David Gerstein. The Walt Disney Company typically uses terms such as Mickey & Friends or Mickey & the Gang to refer to the character franchise.

Mighty Mouse

originally called Super Mouse, and made his debut in the 1942 short *The Mouse of Tomorrow*. The name was changed to Mighty Mouse in his eighth film, 1944's *The Wreck of the Hesperus* - Mighty Mouse is an American animated character created by the Terrytoons studio for 20th Century Fox. He is an anthropomorphic superhero mouse, originally called Super Mouse, and made his debut in the 1942 short *The Mouse of Tomorrow*. The name was changed to Mighty Mouse in his eighth film, 1944's *The Wreck of the Hesperus*, and the character went on to star in 80 theatrical shorts, concluding in 1961 with *Cat Alarm*.

In 1955, *Mighty Mouse Playhouse* debuted as a Saturday morning cartoon show on the CBS television network, which popularized the character far more than the original theatrical run. The show lasted until 1967. Filmation revived the character in *The New Adventures of Mighty Mouse and Heckle & Jeckle*, which ran from 1979 to 1980, and animation director Ralph Bakshi revived the concept again in *Mighty Mouse: The New Adventures*, from 1987 to 1988.

Mighty Mouse also appeared in comic books by several publishers, including his own series, *Mighty Mouse* and *The Adventures of Mighty Mouse*, which ran from 1946 to 1968.

Mighty Mouse is known for his theme song, "Mighty Mouse Theme (Here I Come to Save the Day)", written by composer Marshall Barer.
