Shapeshifting

transformations is found in folktales throughout Europe, and Patricia A. McKillip references it in her Riddle-Master trilogy: a shape-shifting Earthmaster - In mythology, folklore and speculative fiction, shapeshifting is the ability to physically transform oneself through unnatural means. The idea of shapeshifting is found in the oldest forms of totemism and shamanism, as well as the oldest existent literature and epic poems such as the Epic of Gilgamesh and the Iliad. The concept remains a common literary device in modern fantasy, children's literature and popular culture. Examples of shape-shifters include changelings, jinns, kitsunes, vampires, and werewolves, along with deities such as Loki and Vertumnus.

Shape

A shape is a graphical representation of an object's form or its external boundary, outline, or external surface. It is distinct from other object properties - A shape is a graphical representation of an object's form or its external boundary, outline, or external surface. It is distinct from other object properties, such as color, texture, or material type.

In geometry, shape excludes information about the object's position, size, orientation and chirality.

A figure is a representation including both shape and size (as in, e.g., figure of the Earth).

A plane shape or plane figure is constrained to lie on a plane, in contrast to solid 3D shapes.

A two-dimensional shape or two-dimensional figure (also: 2D shape or 2D figure) may lie on a more general curved surface (a two-dimensional space).

Female body shape

body shapes. Reflecting the wide range of individual beliefs on what is best for physical health and what is preferred aesthetically, there is no universally - Female body shape or female figure is the cumulative product of a woman's bone structure along with the distribution of muscle and fat on the body.

Female figures are typically narrower at the waist than at the bust and hips. The bust, waist, and hips are called inflection points, and the ratios of their circumferences are used to define basic body shapes.

Reflecting the wide range of individual beliefs on what is best for physical health and what is preferred aesthetically, there is no universally acknowledged ideal female body shape. Ideals may also vary across different cultures, and they may exert influence on how a woman perceives her own body image.

The original members were Dan Hamilton (guitar/lead vocal), Joe Frank Carollo (bass/vocal), and Tommy Reynolds (multi-instrumentalist/vocal), all of whom had previously played in The T-Bones, a 1960s band noted for the instrumental hit "No Matter What Shape (Your Stomach's In)".

The group first hit the charts in 1971 with "Don't Pull Your Love". Reynolds left the group in late 1972 and was replaced by keyboardist Alan Dennison, but the band kept the name Hamilton, Joe Frank & Reynolds until 1976. This revised line-up performed the group's biggest hit, 1975's "Fallin' in Love".

Reflection symmetry

symmetry (different type of symmetry) Chirality Stewart, Ian (2001). What Shape is a Snowflake? Magical Numbers in Nature. Weidenfeld & Nicolson. p. 32 - In mathematics, reflection symmetry, line symmetry, mirror symmetry, or mirror-image symmetry is symmetry with respect to a reflection. That is, a figure which does not change upon undergoing a reflection has reflectional symmetry.

In two-dimensional space, there is a line/axis of symmetry, in three-dimensional space, there is a plane of symmetry. An object or figure which is indistinguishable from its transformed image is called mirror symmetric.

Joy

"Ambiguous Affect", and presents the theory that excitement and joy are what shape a personality, building in past joys. She posits that joy and excitement - Joy is the state of being that allows one to experience feelings of intense, long-lasting happiness and contentment of life. It is closely related to, and often evoked by, well-being, success, or good fortune. Happiness, pleasure, and gratitude are closely related to joy but are not identical to it.

The general shape or figure of a person is defined mainly by the molding of skeletal structures, as well as the distribution of muscles and fat. Skeletal structure grows and changes only up to the point at which a human reaches adulthood and remains essentially the same for the rest of their life. Growth is usually completed between the ages of 13 and 18, at which time the epiphyseal plates of long bones close, allowing no further growth (see Human skeleton).

Many aspects of body shape vary with gender and the female body shape especially has a complicated cultural history. The science of measuring and assessing body shape is called anthropometry.
