Alexander Graham Bell

Alexander Graham Bell (/ˈæləɡrəˌm/ ; born Alexander Bell; March 3, 1847 – August 2, 1922) was a Scottish-born Canadian-American inventor, scientist, and - Alexander Graham Bell (; born Alexander Bell; March 3, 1847 – August 2, 1922) was a Scottish-born Canadian-American inventor, scientist, and engineer who is credited with patenting the first practical telephone. He also co-founded the American Telephone and Telegraph Company (AT&T) in 1885.

Bell's father, grandfather, and brother had all been associated with work on elocution and speech, and both his mother and wife were deaf, profoundly influencing Bell's life's work. His research on hearing and speech further led him to experiment with hearing devices, which eventually culminated in his being awarded the first U.S. patent for the telephone, on March 7, 1876. Bell considered his invention an intrusion on his real work as a scientist and refused to have a telephone in his study.

Many other inventions marked Bell's later life, including ground-breaking work in optical telecommunications, hydrofoils, and aeronautics. Bell also had a strong influence on the National Geographic Society and its magazine while serving as its second president from 1898 to 1903.

Beyond his work in engineering, Bell had a deep interest in the emerging science of heredity. His work in this area has been called "the soundest, and most useful study of human heredity proposed in nineteenth-century America ... Bell's most notable contribution to basic science, as distinct from invention."

José Raúl Capablanca

Games of Chess. G. Bell & Sons. pp. 171–202. Golombek, H. (1959). "Prelude to Retirement". Capablanca's Hundred Best Games of Chess. G. Bell & Sons. pp. 171–202 - José Raúl Capablanca y Graupera (19 November 1888 – 8 March 1942) was a Cuban chess player who was the third world chess champion from 1921 to 1927. A chess prodigy, he was widely renowned for his exceptional endgame skill and speed of play.

Capablanca was born in 1888 in the Castillo del Príncipe, Havana. He beat Cuban champion Juan Corzo in a match on 17 November 1901, two days before his 13th birthday. His victory over Frank Marshall in a 1909 match earned him an invitation to the 1911 San Sebastián tournament, which he won ahead of players such as Akiba Rubinstein, Aron Nimzowitsch and Siegbert Tarrasch. Over the next several years, Capablanca had a strong series of tournament results. After several unsuccessful attempts to arrange a match with then world champion Emanuel Lasker, Capablanca finally won the world chess champion title from Lasker in 1921.

Capablanca was undefeated from February 10, 1916, to March 21, 1924, a period that included the world championship match with Lasker.

Capablanca lost the title in 1927 to Alexander Alekhine, who had never beaten Capablanca before the match. Following unsuccessful attempts to arrange a rematch over many years, relations between them became bitter. Capablanca continued his excellent tournament results in this period but withdrew from serious chess in 1931. He made a comeback in 1934, with good results, but also showed symptoms of high blood pressure. He died in 1942 of a brain hemorrhage.

Capablanca excelled in simple positions and endgames; Bobby Fischer described him as possessing a "real light touch". He could play tactical chess when necessary, and had good defensive technique. He wrote several chess books during his career, of which Chess Fundamentals was regarded by Mikhail Botvinnik as the best chess book ever written. Capablanca preferred not to present detailed analysis but focused on critical moments in a game. His style of chess influenced the play of future world champions Bobby Fischer and Anatoly Karpov.

Mabel Gardiner Hubbard

Mabel Gardiner Hubbard Bell (November 25, 1857 – January 3, 1923) was an American businesswoman, and the daughter of Boston lawyer Gardiner Green Hubbard - Mabel Gardiner Hubbard Bell (November 25, 1857 – January 3, 1923) was an American businesswoman, and the daughter of Boston lawyer Gardiner Green Hubbard. She was the wife of Alexander Graham Bell, inventor of the first practical telephone.

From the time of Mabel's courtship with Graham Bell in 1873, until his death in 1922, Mabel became and remained the most significant influence in his life. Folklore held that Bell undertook telecommunication experiments in an attempt to restore her hearing which had been destroyed by disease close to her fifth birthday, leaving her completely deaf for the remainder of her life.

John Bell

John Bell may refer to: John Zephaniah Bell (1794–1883), Scottish artist John Bell (sculptor) (1812–1895), British sculptor John Hyslop Bell (1833–1920) - John Bell may refer to:

George Bell & Sons

he elected to move from his original offices into Fleet Street. There G. Bell & Sons branched into the publication of books on art, architecture, and - George Bell & Sons was an English book publishing house. It was based in London and existed from 1839 to 1986.

Dowsing

Investigation. Kessinger Publishing Reprint Edition, 2004. Bell, A.H., Practical Dowsing. (1965) pub. G.Bell and Sons Ltd. London Bird, Christopher. (1979). The - Dowsing is a type of divination employed in attempts to locate ground water, buried metals or ores, gemstones, oil, claimed radiations (radiesthesia), gravesites, malign "earth vibrations" and many other objects and materials without the use of a scientific apparatus. It is also known as divining (especially in water divining), doodlebugging (particularly in the United States, in searching for petroleum or treasure) or water finding, or water witching (in the United States).

A Y-shaped twig or rod, or two L-shaped ones, called dowsing rods or divining rods are normally used, and the motion of these are said to reveal the location of the target material. The motion of such dowsing devices is generally attributed to random movement, or to the ideomotor phenomenon, a psychological response

where a subject makes motions unconsciously.

The scientific evidence shows that dowsing is no more effective than random chance. It is therefore regarded as a pseudoscience.

Bell 47

The Bell 47 is a single-rotor single-engine light helicopter manufactured by Bell Helicopter. It was based on the third Bell 30 prototype, which was the - The Bell 47 is a single-rotor single-engine light helicopter manufactured by Bell Helicopter. It was based on the third Bell 30 prototype, which was the company's first helicopter designed by Arthur M. Young. The 47 became the first helicopter certified for civilian use on 8 March 1946. The first civilian delivery was made on 31 December 1946 to Helicopter Air Transport. More than 5,600 Bell 47s were produced, including those under license by Agusta in Italy, Kawasaki Heavy Industries in Japan, and Westland Aircraft in the United Kingdom. The Bell 47J Ranger is a modified version with a fully enclosed cabin and tail boom.

Bell Labs

Nokia Bell Labs, commonly referred to as Bell Labs, is an American industrial research and development company owned by Finnish technology company Nokia - Nokia Bell Labs, commonly referred to as Bell Labs, is an American industrial research and development company owned by Finnish technology company Nokia. With headquarters located in Murray Hill, New Jersey, the company operates several laboratories in the United States and around the world.

As a former subsidiary of the American Telephone and Telegraph Company (AT&T), Bell Labs and its researchers have been credited with the development of radio astronomy, the transistor, the laser, the photovoltaic cell, the charge-coupled device (CCD), information theory, the Unix operating system, and the programming languages B, C, C++, S, SNOBOL, AWK, AMPL, and others, throughout the 20th century. Eleven Nobel Prizes and five Turing Awards have been awarded for work completed at Bell Laboratories.

Bell Labs had its origin in the complex corporate organization of the Bell System telephone conglomerate. The laboratory began operating in the late 19th century as the Western Electric Engineering Department, located at 463 West Street in New York City. After years of advancing telecommunication innovations, the department was reformed into Bell Telephone Laboratories in 1925 and placed under the shared ownership of Western Electric and the American Telephone and Telegraph Company. In the 1960s, laboratory and company headquarters were moved to Murray Hill, New Jersey. Its alumni during this time include a plethora of world-renowned scientists and engineers.

With the breakup of the Bell System, Bell Labs became a subsidiary of AT&T Technologies in 1984, which resulted in a drastic decline in its funding. In 1996, AT&T spun off AT&T Technologies, which was renamed to Lucent Technologies, using the Murray Hill site for headquarters. Bell Laboratories was split with AT&T retaining parts as AT&T Laboratories. In 2006, Lucent merged with French telecommunication company Alcatel to form Alcatel-Lucent, which was acquired by Nokia in 2016.

Pisistratus

6–7. Retrieved 8 May 2021. Kenyon, Frederic G. (1912). Aristotle on the Athenian constitution. G. Bell and Sons. pp. 21–23. hdl:2027/inu.30000131032322 - Pisistratus (also spelled Peisistratus or Peisistratos; Ancient Greek: ???????????? Peisistratos; c. 600 BC – 527 BC) was a politician in ancient Athens, ruling as tyrant in

the late 560s, the early 550s and from 546 BC until his death. His unification of Attica, the triangular peninsula of Greece containing Athens, along with economic and cultural improvements laid the groundwork for the later pre-eminence of Athens in ancient Greece. His legacy lies primarily in his institution of the Panathenaic Games, historically assigned the date of 566 BC, and the consequent first attempt at producing a definitive version of the Homeric epics. Pisistratus' championing of the lower class of Athens is an early example of populism. While in power, he did not hesitate to confront the aristocracy and greatly reduce their privileges, confiscating their lands and giving them to the poor. Pisistratus funded many religious and artistic programs, in order to improve the economy and spread the wealth more equally among the Athenian people.

Pisistratids is the common family or clan name for the three tyrants, who ruled in Athens from 546 to 510 BC, referring to Pisistratus and his two sons, Hipparchus and Hippias.
